

*The only patented technology that strengthens
turf's natural ability to withstand stress.*

Balance is the key

The Revolution Difference

Consistency of turf conditions

Drier, firmer putting surfaces

Easier to re-wet after dry down

Less stress for healthier turf

Less hand watering

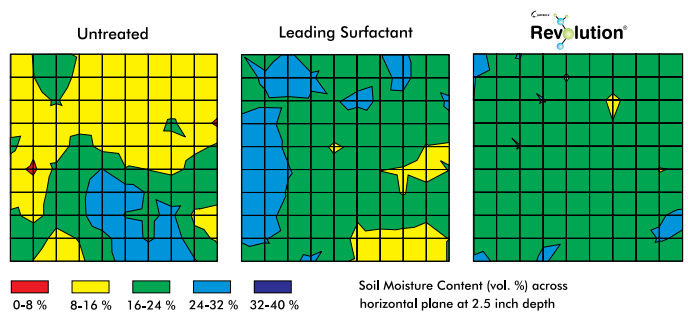

Not Just Another Wetting Agent

Revolution is not a typical wetting agent.

Revolution is the only soil surfactant to balance air and water on the surface and in the rootzone under wet or dry conditions. What does this mean for you? Consistent control for healthier turf and better playing surfaces all season long, no matter what the weather conditions.

- Greens firm up faster
- Ideal for Lean & Mean turf management for tournament ready conditions.
- Strengthens plant's natural ability to withstand stress and disease pressure

Unrivalled Uniformity

Conditions that are too dry or too wet stress the plant and leave it susceptible to physical and environmental stresses. Revolution keeps over 90% of the treated area between 16%-24% soil moisture content, which is consistent with USGA recommendations.

Because Revolution moves water, and everything it carries, off the surface and into the rootzone, fertilizers and pesticides are more evenly distributed. This means less runoff and better efficacy.

Engineered for Performance

Revolution's patented chemical structure creates an interlocking layer of hydration sites across the entire soil particle surface. This allows Revolution to hold water closer to the particle for consistent, uniform coverage – unlike traditional surfactants that can distribute water unevenly and leave areas too wet or too dry.

Revolution allows deep and infrequent watering, and moves moisture off the surface so extended leaf wetness doesn't occur. Revolution's ability to balance air and water also promotes stronger, healthier roots for greater turf playability and performance.

Rates and usage

Revolution is an important part of an effective turf management program, helping to produce healthy, uniform playing surfaces throughout the season under wet or dry conditions.

- 190 ml per 100 sq. m in 8 Liters of water (6 oz/1000 ft²)
- Monthly application – *must commit to at least 3 applications to see full benefits*
- Water in thoroughly the evening following application.
- Water in sufficiently to activate and deliver molecules to a depth of at least 4 inches (1/3" water on high sand rootzones; 1/2" water on native soil greens)

- Exceptionally safe on fine turf species
- Available in liquid or granular formulations

Results you can expect to see:

- Consistent turf performance throughout the season
- Drier, firmer, more uniform playing surfaces
- Reduced water use
- Increased efficiency of fertilizers and chemicals
