

Aquatrols® Maximize Your Mix

Improve Wettability for a Better Bottom Line

An application of AquaGro 2000 added to your mix can overcome its water repellent properties and can save your customers money on water, fertilizer, other soil amendments and labor.

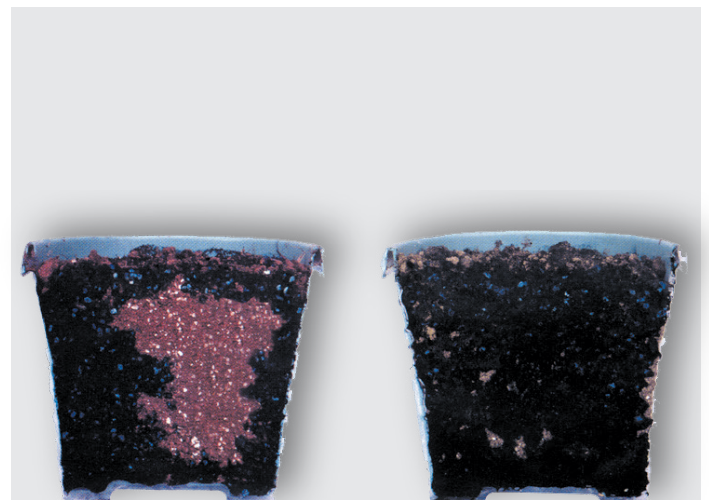

Add AquaGro 2000 to your mix to maximize its ability to wet up and to improve your bottom line with better media. Why AquaGro 2000 instead of other wetting agents? Simple, AquaGro 2000 has a longer shelf life and more proven wettability on a wide range of mix components than any other surfactant on the market. Research shows that mixes wet quickly and uniformly right out of the bag or bale. This means healthier, more robust plants for growers and more return customers for you.

- Improves wettability.
- More uniform water movement.
- Better water retention.
- Longer shelf life.
- Healthier plants, happier customers.

Available as:

AquaGro 2000 G-granular for dry blending.

AquaGro 2000M-liquid for spraying on mix.

Add AquaGro 2000 to your mix for uniform water movement and mix that wets up evenly every time.
